

Cse 307 ETP - Ete practical question paper

Computer Networks (Lovely Professional University)

messages.pdf_cover_qr_code_label

COURSE CODE : CSE307

COURSE NAME : INTERNETWORKING ESSENTIALS

Read the following instructions carefully before attempting the question paper.

1. Attempt only the question allocated by neutral examiner out of all the given questions. If some other question is attempted by the candidate, it shall lead to cancellation of the examination.
2. Submit the question paper along with the answer sheet to the invigilator before leaving the examination hall/lab.
3. Fill all the details mentioned below very carefully in the space provided.

Registration No. : _____ Signature of student: _____

Question No. Allocated to candidate: _____

(To be filled by Neutral Examiner)

It is certified that I have verified that the candidate has attempted the allocated question only.

Signature of Neutral Examiner: _____

Name of Neutral Examiner: _____

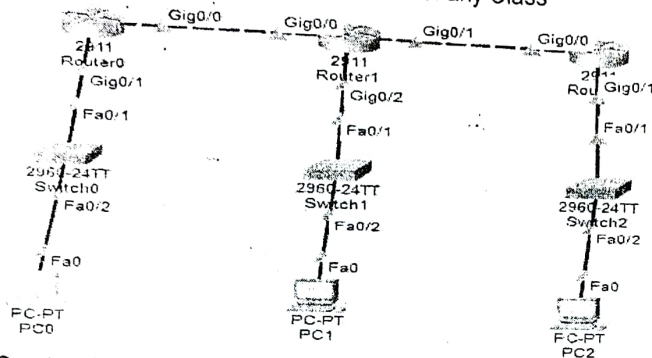

UID: _____

Signature of Invigilator: _____

Name of Invigilator: _____

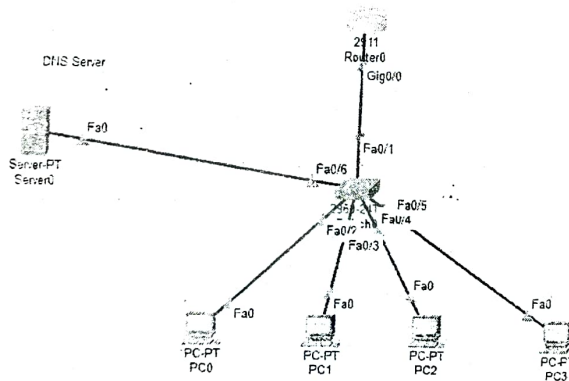

UID: _____

Q1 (A) Implementation of dynamic routing using class B address by configuring routing information on following Scenario using protocol (RIP) Take address of any Class

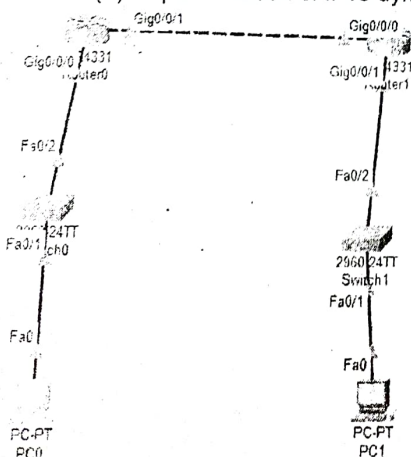

(B) Create a bus topology with 4 end devices and use the ping command to ensure all networks are reachable in addition to this find mac address of every end device Use any address of class c

Q2 (A) Implementation of following DNS Server with class C address

(B) Implementation of IPv6 dynamic routing on following Scenario

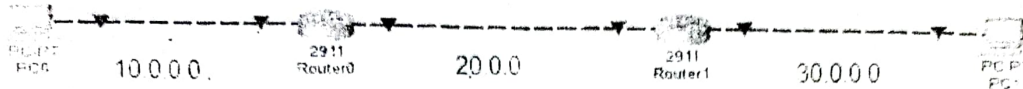

Q3 (A) Create a network With one DHCP server and one FTP server using class C address. Show the working of DHCP and FTP server.

(B) Design a tree topology network with six end devices using a Class B IP address, ensuring efficient structure and connectivity.

Q4 (A) Create hybrid topology with at least 10 PCs and use the ping command to ensure all networks are reachable in addition to this use Arp commands implement sub operations available with these commands use network address 192.168.10.0 for creating this

(B) For the Scenario given below configure static routing the check the connectivity in the network using ping command and find the Mac of every end device

Q5 (A) You are the network administrator for ABC Corp. The company has been assigned the IP address block 192.168.10.0/24 and needs to create subnets for 3 departments with the following host requirements:

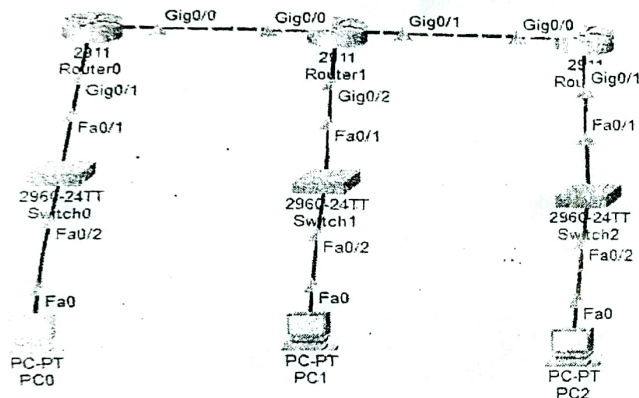

1. **Marketing:** 60 hosts
2. **Finance:** 30 hosts
3. **IT:** 20 hosts

Question:

1. Determine the appropriate subnet mask for each department.
2. Allocate the subnet addresses and provide the range of usable IP addresses for each subnet.

(B) Implement Email and DNS by creating own scenario using class C address.

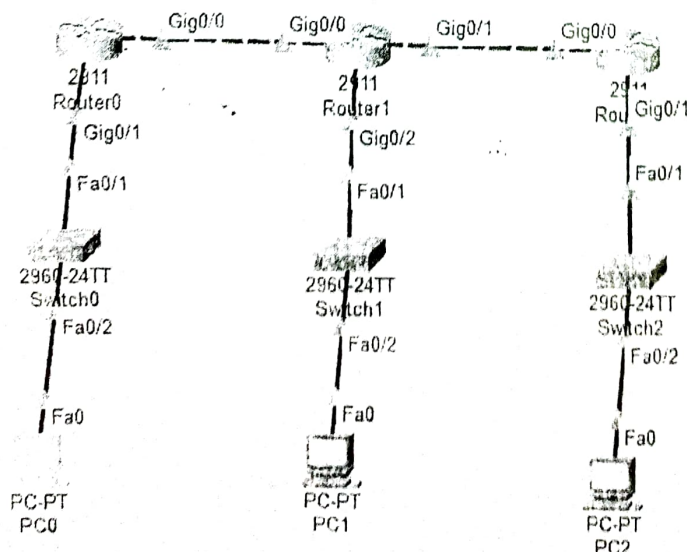

Q6 (A) Configure the Static Routing concept on the following network using class C

(B) Configure the network using private class B along with one HTTP Server. Network should have 4 PC, 1 Server and 1 Switch.

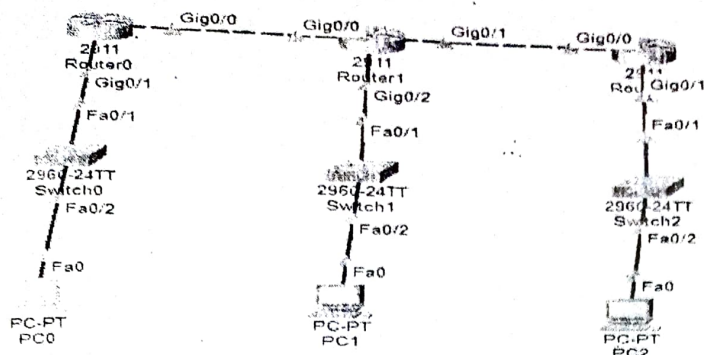

Q7 (A) Configure the network with CLI using class B address along with one email server and HTTP server.

(B) Implementation of dynamic routing using classful addressing by configuring routing information protocol (RIP) Take address of class c

Q8

(A) Using any address of Class C for following Scenario implement static routing.

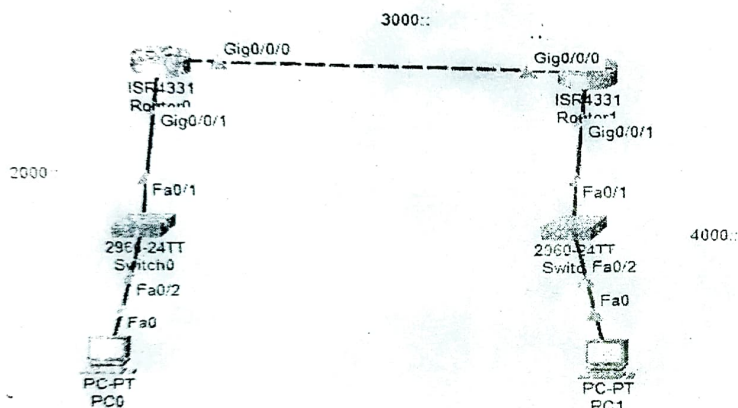

(B) Implementation DNS and HTTP Server by taking own scenario using class B address.

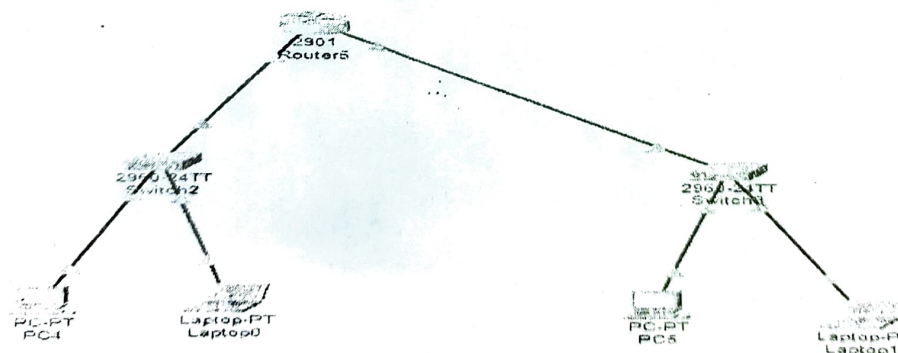

Q9

(A) Implementation and configure Mesh topology with 4 End devices Check the connectivity of every end device and also find Mac of every end device using IP address of Class A

(B) Implementation of IPv6 static routing

Q10 (A) Use IPV6 addressing to implement dynamic routing of the following network Take any address

(B) Design a network using 1 Server (FTP) and 2 PC perform all commands related to FTP.
